

Managed Desktop Deployment

SITUATION

- Aging Desktop fleet lowers staff performance and increase maintenance cost
- Companies are struggling to keep up with the constant hardware and software updates
- Desktop fleet life cycle management are often overlooked

Virtunet

CHALLENGES

- Desktop Rollouts can be time consuming and requires plenty of IT resources
- Upfront funding for new hardware and software licenses can be difficult
- Traditional desktop management processes are inefficient and repetitive

OBJECTIVE

- Manage hardware lifecycle to better plan for hardware refresh
- Streamline Procurement and Deployment of desktop fleet
- Utilize desktop management tools to better manage support and updates

BUSINESS CASE & IT ASSET AUDIT

A business case is drawn to investigate the total costs of desktop deployment, which includes but are not limited to hardware, licensing, services, logistics and training.

IT asset audit will then be done to collect and report hardware and applications used within the company, this will allow better decision making especially through volume licensing.

CONSOLIDATING APPLICATIONS AND HARDWARE

We work with you to determine which applications will be redeployed on new systems and package or script those applications so they can be reinstalled quickly and automatically.

Having too many different types of desktop and laptop can cause management inefficiency, a desktop deployment project is a great opportunity for organizations to rationalise the hardware fleet.

CREATE A STANDARD IMAGE

Virtunet can assist in the creation of a standard image for the desktop fleet. We can also send one unit of each hardware type for you to work on the image if needed before deployment.

DEPLOYMENT & AUTOMATION

Our customers have access to qualified engineers who will speed up the deployment process to ensure minimal business impact.

We can also automate the preservation of local user data and preferences if required.

MANAGEMENT & FINANCING

Virtunet offer a range of management tools designed to automate inventory reporting, driver and utility updating, remote BIOS management, hardware monitoring. Our premium software also allows for application virtualization, deployment, migration, diagnostics and remote assistance.

Better utilize your IT budget by leasing your hardware fleet. Leasing allows flexibility in keeping or replacing your hardware as they reached retirement state.
