

SOFTWARE

CISCO

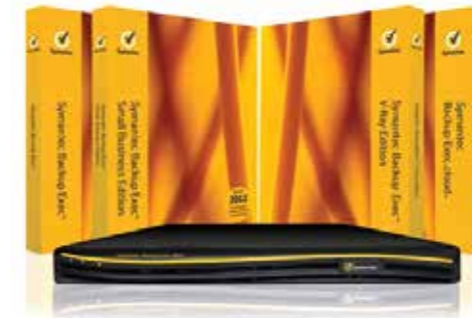

Smartnet

A Smartnet contract ensures proper support and maintenance coverage for all the Cisco business-class products you've purchased.

Depending on which level of Smartnet contract you have, at minimum you'll have technical support directly from Cisco. This technical support includes deliveries of proper IOS image, firmware, or updates/patches for your Cisco product. The support also includes configuration assistance, network setup, and replacements should the product that you have has physical damage.

SOFTWARE

VMWARE

Symantec Backup Exec

Symantec Backup Exec allows your business to protect more of your proprietary data without the bulk that comes with it. It delivers reliable data and Windows Server backup optimised for your business. The data may be from the local system or from a remote system using an "agent." Available agents include the ability to back up filesystem snapshots, synthetic backups, and the ability to back up databases such as Microsoft Exchange, Microsoft SQL Server and Oracle databases.

Symantec Endpoint Protection

Symantec Endpoint Protection protects end-users in 3 ways: as a firewall, a proactive protection and an intrusion prevention. Endpoint incorporates rules-based firewall and anti-malware technologies called Generic Exploit Blocking. Endpoint's TruScan and Deepsight technologies proactively analyses applications for threats and guards against them. Endpoint's Intrusion Prevention System acts as a first line of defence by enforcing rules on end-point devices and blocks attacks before the damage is done.

MICROSOFT

Microsoft Office

Microsoft Office is the popular productivity suite from Microsoft Windows, used by billions worldwide. The common MS Office Applications include Microsoft Word, Excel, Outlook and PowerPoint and Windows exclusive apps such as MS Access, OneNote, and several others. The latest version of MS Office (2013) comes with extra benefits to improve your productivity - extended file format support, user interface updates and support for touch PC's (smartphones, tablets) and even the cloud!

Windows Server

Windows Server is the group of server OS patented by Microsoft. Windows Server 2012, codenamed "Windows Server 8", is the latest server edition of the much anticipated Windows 8. It redefines the server category by delivering hundreds of new features and enhancements over Windows Server 2008 R2, such as an updated version of Hyper-V, an IP address management role, a new version of Windows Task Manager, and ReFS, a new file system. Simply put, Windows Server helps you transform your IT operations to reduce costs and deliver a whole new level of business value.

ADOBE

Creative Cloud for Teams

Adobe Creative Cloud is the digital hub that lets you download and install every Adobe Creative Suite 6 application; access online services for file sharing, collaboration, and publishing; and benefit from new apps and features as soon as they're released — giving you the freedom to create anything you can imagine, all for one affordable monthly subscription price!

What's even better, you can now purchase and manage your Creative Cloud for Teams subscriptions through the new Adobe Value Incentive Plan (VIP). Adobe VIP is a subscription-based licensing program designed for companies of all sizes. It allows Adobe's customers to access the centrally managed Admin Console portal, which gives you the ability to see what products have been purchased and added.

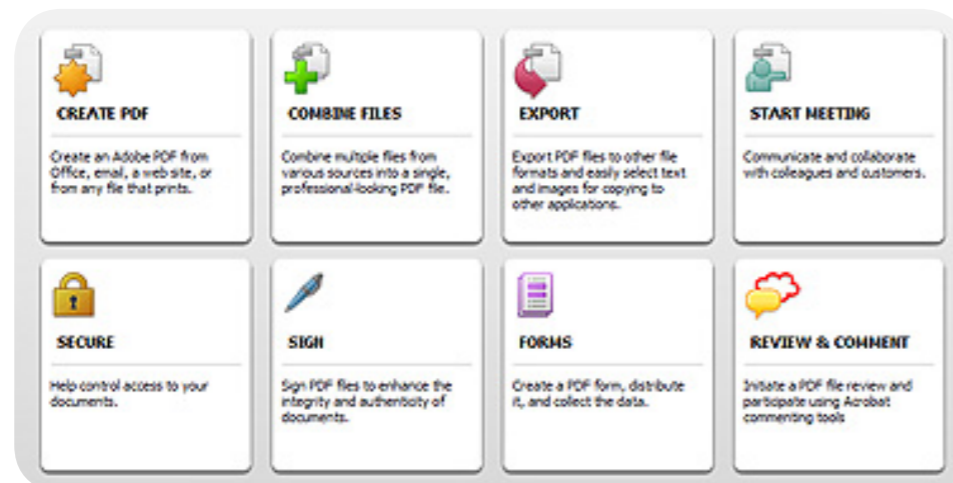

Acrobat

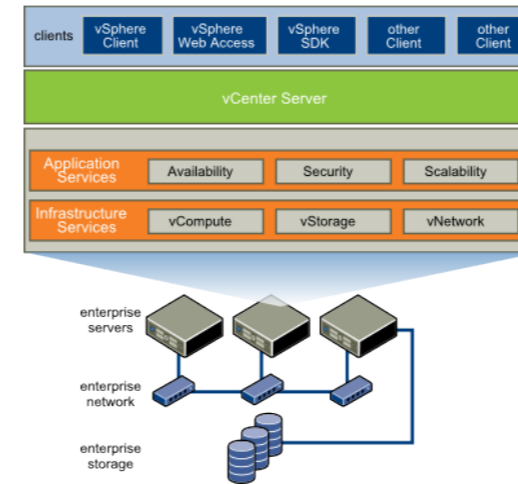

Adobe Acrobat is a set of document application software that gives us with all the features that we've come to love about Portable Document Formats (PDF's) – PDF viewing, creation, editing, conversion, manipulation, printing and overall standardised PDF tasks.

The latest Adobe Acrobat XI comes with multiple enhancements:

- Free Adobe tools, such as Customization Wizard and the Enterprise Toolkit for Acrobat, ease of configuration and administration
- Support for Microsoft SCCM/SCUP and Apple Remote Desktop helps streamline deployment and updates
- Deliver Acrobat XI as a centrally managed, touch-friendly virtual application via Citrix XenApp

VMWARE

vSphere

VMware vSphere with Operations Management combines the world's leading virtualisation platform with VMware's award-winning management competencies. vSphere leverages on improved availability, performance, and efficient capacity utilisation to provide IT with total operational insight into their virtual environment. With vSphere, you can keep your business running at its best while staying compliant with demanding service level agreements, all at the lowest possible TCO.

Transform your IT infrastructure into a private cloud, bridge on-demand to public clouds, and deliver your IT assets seamlessly- with the support of over 3,000 applications from more than 1,650 ISV partners, VMware vSphere with Operations Management is the trusted platform for any application.

STORAGECRAFT

StorageCraft ShadowProtect Server

ShadowProtect from StorageCraft is a real-time backup & disaster recover solution for your organisation, no matter when and where it's located. It provides fast and reliable backup, disaster recovery, enterprise level data protection, and managed system migration to get servers online as quickly as possible after a disaster.

StorageCraft ShadowProtect Server

For your hybrid and virtual computing environments, business continuity is just an installation away with StorageCraft ShadowProtect Virtual. It will backup anything in a Windows virtual environment and recover it anywhere - to another type of hypervisor, to physical environments, or to the cloud.

Ultimately, with StorageCraft ShadowProtect you can:

- Protect your entire server/virtual system – including the operating system, applications, platforms, integrated services and your data.
- Quickly and easily restore to an available point-in-time after disaster strikes
- Use local or cloud-based backup images to perform complete bare metal recovery of servers to the same system, to dissimilar/new hardware or to and from virtual environments
