

MICROSOFT OFFICE 365 CLOUD SOLUTION

Are you looking to take your desktop applications to the highest levels of productivity, collaboration, mobility and redundancy?

The Virtunet Solution will provide you with the correct licenses to suit your setup and assist your implementation whilst enhancing productivity at your workplace.

VIRTUNET SOLUTION

- One website for all your licenses and quick deployment
- One license for a staff member allows the access to the range of Office products on their desktop, notebook, tablet, phone and a license at home
- 99.9% uptime with support available 24/7
- No more requirement to maintain and host expensive servers or managing updates and upgrades
- Flexible licensing structure for the individual staff members and based on their requirements

What is the Situation?

- Companies are looking to save tens of thousands of dollars on hardware infrastructure
- A standard office worker is looking to access information on their desktop, notebook, tablet and phone
- Latest versions of applications often take days and weeks for the migration and then days and weeks of training
- Storage and archiving is costing thousands of dollars and slowing down your network
- Platforms like Citrix are expensive and difficult to manage

Your Challenges are:

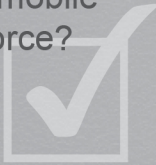

- IT staff want more control over administrator and management of licences
- More information is being accessed outside the office environment
- Multiple roles exist within companies and they have different needs
- Different authorisation and account numbers at Microsoft over time make it difficult to keep track of licenses
