## Cisco Meraki

### Cloud Managed Networking

The Cisco Meraki portfolio of networking devices provides centralised management, visibility and control for customers to overcome business challenges using full-feature and easy-to-use cloud architecture.

Benefits of using Cisco Meraki:

- Manage entire network from a single dashboard
- Control users, applications, and devices
- No controller hardware or management software to install and maintain
- Secure (PCI and HIPAA-compliant) cloud infrastructure
- Scales from small sites to million-user deployments

### Cisco Meraki MR34

Dual-concurrent 3x3 MIMO 802.11ac Access Point

Cisco Meraki MR34 features:

- Aggregate data rate of up to 1.75 Gbps
- Automatic cloud-based RF optimisation
- Secure wireless environments using 24x7 Air Marshal

### Cisco Meraki MR18

Dual-radio 2x2 MIMO 802.11n Access Point

Cisco Meraki MR18 features:

- Dual enterprise class 802.11n radios, up to 600Mbps
- Low profile, environmentally friendly design
- Integrated enterprise security and guest access

## HP Cloud-Managed

### Cloud Managed Networking

HP Cloud Managed Networking delivers an easy-to-manage network solution that minimizes IT spend and simplifies wireless networking for small businesses and distributed branch offices. The solution helps lower up-front costs with a flexible software-as-a-service (SaaS) cloud subscription and brings users online faster with single-click provisioning.

Benefits of using HP Cloud-Managed Portfolio:

- Monitor connectivity status with intuitive dashboard
- Flexible one-click firmware upgrades for all APs
- Easy drill-down menus that provide summary information of APs
- Generate on-demand reports that provide snapshots of your network and security

### HP 350

Cloud-Managed Dual Radio 802.11n (WW) Access Point

HP 350 features:

- Two and Three spatial stream MIMO Technology
- Motion Aware roaming for best AP discovery
- Extends RF coverage with transmit beamforming

### HP 365

Cloud-Managed Dual Radio 802.11ac (WW) Access Point

HP 365 features:

- Up to 600Mbps to 1.3Gbps for optimised performance in Rich Media
- WLAN coverage with Wi-Fi Clear Connect RF optimization
- Integrated web filtering and malware protection

## NetComm Wireless M2M Wireless Products

NetComm Wireless rugged industrial M2M wireless broadband gateways connect to wireless networks to support the remote monitoring, management and control of connected equipment from virtually any location worldwide.

Benefits of using NetComm Wireless:

- Manage entire network from a single dashboard
- High Bandwidth 4G
- Complete connectivity
- Multi-point communication

### NetComm NTC-140 4G WiFi M2M Router

Netcomm NTC-140 features:

- Two Gigabit Ethernet ports and high speed WiFi connectivity
- Vehicle voltage support, GPS and Ignition input
- Embedded NetComm Linux OS & Software Development Kit (SDK)

### NetComm NTC-30WV 3G Marine Outdoor WiFi Router

NetComm NTC-30WV features:

- Dual enterprise class 802.11n radios, up to 600Mbps
- Landline calls over the 3G cellular network on the open ocean
- IP67 rated metal casing that is both dust proof and water resistant

## RSA Authentication Security Solutions

RSA offers intelligence driven security solutions that helps secure your applications on premise or in the cloud, defend against emerging threats, in both web and mobile channels through a self-learning risk engine without compromising end user security and convenience.

Benefits of using RSA:

- Seamlessly verifies user identities with policy-based contextual assessments
- Control of the privacy and security of identities
- Deploy as an on-premise product or as a software-as-a-service (SaaS) offering

### RSA SecurID

Hardware Tokens

Protect your high value applications with the industry's highest-quality, two-factor authentication device. Gain two-factor authentication, hard-disk encryption, email and transaction signing capabilities—with just one token.

RSA SecurID features:

- Two-factor authentication, hard-disk encryption, and email signing
- AES-128 algorithm and time synchronisation
- Automated code generator every 60 seconds

## Applications

### Microsoft Office 365

Unleash your organisation's potential with the leading productivity solution that empowers your employees to work with familiar tools in new ways—anytime, anywhere. Choose the right software service for you to host your business applications and email with either Office 365 Home, Business or Enterprise platforms.

Microsoft Office 365 features:

- Latest, full installed versions of Word, Excel, PowerPoint, OneNote, Outlook, Publisher, and Access
- OneDrive for Business—1TB of personal cloud storage that syncs with any PC/Mac for offline access
- Application usage across all PC, Mac, Windows, iOS and Android devices

### Adobe Creative Cloud for Teams (CCT)

Get the world's best creative apps and everything else your business needs to efficiently create amazing content and collaborate freely across desktop and mobile. With expert training, advanced support and hassle-free deployment, the 2015 release of Creative Cloud for teams makes it easy to do great work together and drive powerful business results.

Adobe CCT features:

- Web-based Admin Console to easily purchase seats, add users and manage licenses
- Creative Cloud Packager—centrally deploy all – or a customised subset of – the Creative Cloud applications and control the frequency of updates
- Creative Cloud Libraries—create and share colors, character styles, graphics, Adobe Stock assets and more

### Adobe Acrobat Document Cloud (DC)

Give your workforce the tools they need to drive 100%-digital document workflows. It includes Acrobat DC desktop software, Acrobat mobile and cloud-based PDF services — plus eSign services for automating and integrating e-signature processes across your organisation.

Adobe Acrobat DC features:

- Turnkey integrations or APIs to embed e-signature processes into enterprise apps and systems
- Document tracking for e-signature process via web, mobile or enterprise apps
- Enterprise dashboard for managing Adobe DC users, groups and entitlements

## Wireless Printing

### Apple AirPrint

Print full quality photos and documents wirelessly from your Mac, iPhone, iPad, or iPod touch over a Wi-Fi network without having to install additional software.

Apple AirPrint features:

- Easy printer discovery
- Automatic media selection
- In-built application printing capabilities
- Enterprise-class finishing options

### HP ePrint

Print from virtually anywhere! Use your mobile devices to print business documents, directions, photos, and more—directly to your HP ePrint enabled printer.

HP ePrint features:

- Unique printer e-mail address to send file attachments easier for printing
- Protected mode option to specify preferred senders of emails to your web-connected printer
- Intelligent paper tray automation

## Software as a Service (SaaS)

### Hosted Networks - Application Streaming

Application Streaming easily enables a traditional Windows Application as "Cloud Ready" without having to invest in rewriting the software to allow for it. It also instantly reduces support and maintenance requirements by allowing for central management and patching.

### Security Firewall

#### Sophos UTM - Full Guard

Sophos UTM gives you complete security from the network firewall to endpoint antivirus in a single modular appliance. It simplifies your IT security without the complexity of multiple-point solution and provides an intuitive interface to help you quickly create policies to control security risks.

### Virtualisation

#### Private VMware Vcloud Suite

Build a vSphere-based private cloud on premises with vCloud Suite to help your business develop strategic IT outcomes by virtualising and optimising infrastructure, automating service delivery, and providing high availability for both traditional and new application types.

#### Public Cloud vCloud Air

Built on the trusted foundation of VMware vSphere, vCloud Air is compatible with your on-premise data center, that includes Infrastructure as a Service, Recovery as a Service and a vast catalog of supported Applications and Operating Systems. It delivers twice the compute power of Microsoft Azure and three times the storage performance of Amazon AWS.

#### VMware vRealize Suite

Purpose-built for the hybrid cloud, VMware vRealize™ Suite delivers and manages infrastructure and applications quickly while maintaining IT control. It provides a comprehensive management stack for IT services on vSphere and other hypervisors, physical infrastructure and external clouds, all with a unified management experience.

### Cloud Corporate Solution

#### Virtunet Customer Portal

Virtunet Managed Services now includes the Virtunet Customer Portal—a 24/7 account access provided to all Virtunet account holders.

Virtunet Customer Portal features:

- Account function—access to all your invoices and serial numbers to clearly display outstanding balances to suitably plan out your expenses
- Backorders function—updated ETA reports for all your purchases with Virtunet
- Renewals function—complete list of all the licensing authorisation and contract numbers in the one place for convenience
- IT Assets function—track hardware orders purchased with Virtunet that displays purchase dates, warranty expiry and end of life dates
